Your Website: A Manual for Non-Coders

Contents

README.md

When this gets old, we can adapt this site for a CMS (Content Management System,) which would allow you to edit your content without any code on your end for a monthly subscription.

This site can, hypothetically, accommodate additions including, say, a book plug, a bilingual page, a CV, whatever might one-up your nemesis, a periodic makeover, etc, at any point in space-time.

Ask ~The Designer~ about more complex changes incl. page styling, section transitions, special effects, domain hosting / nameservers, cybersecurity:
T: 1.617.939.4233, mikki@janower.net

To change your selected works...

Select Writings		Back
○ I lived it: Alone with my Thoughts and a Crateful of Trance Vinyls	*Swipe Life*	2069
○ Breakfast: Not for the Faint of Heart	*Men's Health*	2069
○ My Girlfriend is a Gemini Rising, and That's Okay	*Tiger Beat*	2069
○ Am I Upset, or Am I Just Hungry? 5 Easy Ways to Find Out	*Us Weekly*	2069
● Op-Ed: The Goyim on the F Train Have No Right to Perceive Me	*Refinery29*	2069
○ The Earth Isn't Flat, But Mars Is	*ManRepeller*	2069
○ Ten Times I Meowed Back at Cats on the Street, and Why it Matters	*Teen Vogue*	2069

- Github → code → index.html → scroll down until you see:

```
<!----------------------------------------------Select Writings----------------------------------------------   or
<!---------------------------------------------Select Translations------------------------------------------->
```

- Each listing looks like this...

● My Girlfriend is a Gemini Rising, and That's Okay	*Tiger Beat*	2069

- ...and its code looks like this:

```html
<div class="listing" href="" target="_blank">
    <div id="key">○</div>
    <div class="title"><a href="examplewebsite.com" target="_blank">My Girlfriend is a Gemini Rising, and That's Okay</a></div>
    <div id="publication">Tiger Beat</div>
    <div id="year">2069</div>
</div>
```

  - Change the title of your work and the page to which it links:

```html
<div class="title"><a href="examplewebsite.com" target="_blank">My Girlfriend is a Gemini Rising, and That's Okay</a></div>
```

      link to work   title of work

  - Change the publication name:

```html
<div id="publication">Tiger Beat</div>
```
   publication name

  - Change the year of publication:

```html
<div id="year">2069</div>
```
      year of publication

  - Delete the block of code above to get rid of a listing. Copy and paste the block of code to add a new listing, or cut and paste to and rearrange an existing one.

To change your about section...

- Github → code → index.html → scroll down until you see:

```
<!--------------------------------------------------About section-------------------------------------------------->
```

- Change header text:

```
<div class=toprow>
    <span>X</span><span>Joshua Leifer is currently based in Brooklyn, New York.</span>
</div>
```
your content goes here

- Change body content:

```
<div class="content">Authentic unicorn cred deserunt, blog knausgaard officia gentrify do. IPhone laborum poke +1
```
your content goes here. To add a line break
between paragraphs as seen above, paste

- Change buttons (Email Are.na):

```
<div class="aboutlink"><a target="_blank" href = "https://www.are.na/joshua-leifer">Are.na</a></div>
```
paste link here   link title

  - You can create a button by copying and pasting this line of text directly below the others.
  - You can delete a button by deleting the corresponding line of text.

To change your headline...

Joshua Leifer is Assistant Editor at
[Jewish Currents](). His writing has appeared
in [Dissent](), [972](), [n+1](), [The Guardian](),
[The Nation](), [Jacobin](), [Haaretz](), [The Baffler](),
[Slate](), and others.

- Github → code → [js]() folder → [typing-effect.js]()
- Change typing speed:
    - Find `speed: 36` and swap out the 36; *increasing* the number will slow down the effect, and *decreasing* the number will speed it up.
- Customize typing effect:
    - This is visit typeitjs.com for easy options and code you can copy and paste.
- Change content:
    - Find `.type(` and swap out the content as shown below.
      hint: <a marks the beginning of a link, and marks the end of a link. Everything in between them is, you guessed it, a link; everything outside them is regular text.

Example 1: [Jewish Currents]().

```
.type('<a href="https://jewishcurrents.org/author/joshua-leifer/" target="_blank">Jewish Currents</a>. ',
```
            link   link title

Example 2: His writing has appeared in [Dissent](),

```
.type(' His writing has appeared in <a href="https://www.dissentmagazine.org/" target="_blank">Dissent</a>,
```
       normal text   link   link title
